Q1. [2 marks]

Define asymptotic efficiency of an algorithm.

I would like to go to sleep. I don't really want to give the exam today. I am not so interested in giving the exam.

Q2. [2 marks]

What are the steps involved in Divide and Conquer approach?

[No answer provided]

Q3. [2 marks]

What is meant by a stable sort? Give one example.

[No answer provided]

Q4. [10 marks]

Explain why a reverse sorted array results in worst case time complexity for Insertion Sort. Illustrate with an example.

[No answer provided]

Q5. [10 marks]

What is the Maximum Subarray Problem? Describe the Divide and Conquer approach to solve it and analyse its time complexity.

Fuck you. I don't want to answer this question.
